

# VIRTUAL CREDIT CARD CHECKLIST

## Is Your Business Ready to Make the Switch?

As a new payment type, virtual credit cards can significantly lower processing costs for businesses and save time by eliminating the manual work of check issuing. Virtual credit cards help you pay your vendors faster and offer one of the most secure ways to pay, with a host of security features that make them a safer choice than physical credit cards.

For companies that rely on accounting software, virtual credit cards can be fully integrated into the accounts payable workflow. But even with all these advantages, some businesses may be hesitant to get on board.

Take a look at our checklist to find out if your business is ready.

### CHECK ALL THAT APPLY

Think about your current accounts payable process and payments workflow as you move through the checklist.

### YOUR RESULTS

If you checked three or more items on the list, then your business can benefit from virtual credit cards. Learn how you can start paying vendors directly with BeanPay.

Book a demo today and make the switch to a revolutionary new form of payment:

<http://get.beanworks.com/beanpay/>

- Security controls are important to our business
- Our vendors want faster payments
- We typically have many stale dated cheques
- We process hundreds of invoices each month through accounts payable
- Credit card fraud is a concern for our business
- Our current accounting software doesn't have an integrated payments workflow
- We print and mail our own checks
- We want to earn cash rebates and reduce our AP costs
